The most effective ebook i possibly read. it was actually written quite completely and useful. I am just very happy to tell you that here is the best publication we have read through during my individual daily life and could be the greatest publication for possibly.

The whole theory for the hyperbola is, therefore, at once evident, and further details may be omitted. The above theory for the ellipse is also capable of another interpretation. We may say that the conjugate ellipse is wholly imaginary, and that the theorems in the above list give us the focal properties of the conjugate ellipse. In the case of the parabola, the theory of the imaginary foci is more complicated. Since the line at infinity is tangent to the parabola, two of the four tangents drawn from 1 and J coincide, and there are left only three tangents and three points of intersection. Two of these are I and J, and the other is the real finite focus. Thus the circular points at infinity are the imaginary foci of the parabola. It would be interesting to know what properties the points / and J have in common with the finite foci of a conic, and especially with the finite focus of a parabola; but this question I have not investigated.
